SUMMARY

Computer Science student at Sunway University (Dean's List, CGPA 3.80) interested in software engineering and AI. I build and self-host web projects end to end, from browser interfaces in HTML, CSS and JavaScript to deployment on Linux with Nginx and Cloudflare Tunnel.

SELECTED PROJECTS

Home Server and Self-Hosting Jul 2026 to present

- Host emirfaza.com from a home PC (Ubuntu on WSL) behind carrier-grade NAT, with Nginx bound to the loopback address and a Cloudflare Tunnel, so no inbound port is open.
- Run Nginx as a hardened systemd service with security headers and a content security policy; fail2ban turns repeated failed logins into IP bans at the Cloudflare edge.
- Run Hermes Agent, an open-source AI agent, on the same machine and use it daily through Telegram; set up its scheduled jobs, choose which language model handles each kind of task from my own benchmarks, and keep a set of local fixes to its source across updates.

Latent Image Labs · WEB1201 group project Jul to Aug 2026

- Set up the shared repository, the live deployment and the design system (colour tokens, type, light table and darkroom themes) for a four-person multi-page site, and built its persistent theme toggle.
- The site has a catalogue with live filtering, search and sorting, a three-step registration flow and a review module saved in localStorage.

Hydroponic Grow-Bay Simulator · PRG1203 group project (Safelight) Jul to Aug 2026

- Java console simulation of grow bays with pumps, sensors and nutrient tanks, using polymorphic crop types and a checked exception for incompatible planting.
- Wrote all of the program code and set up the shared repository, working with an AI coding agent as the course allowed; the rest of the group handled the UML, presentation and video.

emirfaza.com · Personal portfolio Jul 2026 to present

- One-page portfolio with light and dark themes and a print stylesheet; source on GitHub.

EDUCATION

Sunway University Feb 2026 to 2029 (expected)
BSc (Hons) Computer Science *Selangor, Malaysia*
Dean's List Award, Faculty of Engineering and Technology (May 2026 semester). CGPA 3.80 after two semesters. Sunway Entrance Scholarship (2026).
Completed: Programming Principles (Python), Object-Oriented Programming Fundamentals (Java), Web Fundamentals, Computer Organisation, Computer Mathematics, AI Foundation and Applications. Current: Database Fundamentals, Networking Principles, Operating System Fundamentals, Systems Analysis and Design.

SMA Al-Irsyad Satya 2021 to 2024
Mathematics and Natural Sciences *Bandung, Indonesia*
Cambridge International School; graduated with an 84.47 transcript average, including 89.26 in Mathematics and 87.00 in Physics.

TECHNICAL SKILLS

Programming: Python, Java, JavaScript, C
Web: HTML, CSS, responsive layout, accessibility, browser storage
Infrastructure: Linux, Nginx, Cloudflare Tunnel, DNS, systemd, Tailscale
Tools: Git, GitHub, Linux command line
Languages: Indonesian (native); English (IELTS Academic 8.0, CEFR C1)
